launch its development tools, or you can launch them independently from the
Xcode > Open Developer Tool menu: Use Simulator for
rapid prototyping and testing your app in a simulated environment when a real
device isn’t available. Simulator provides environments for iPhone, iPad, Apple
Watch, and Apple TV devices with different settings, files, and operating system
versions. For more information, see <a

Help. Use Instruments to profile and analyze your app,
improve performance, and find memory problems. Instruments collects data and
presents the results using different tools called instruments. For
more information, see <a

Help. Use Create ML to create and train custom machine
learning models for your app. See <a href="/documentation/CreateML"

Composer to construct 3D compositions and augmented reality (AR)
experiences. See <a href="/documentation/RealityKit/creating-3d-content-with-
